CO2 Unit

The CO2 Unit is a portable fire extinguishing apparatus that can be special called to PGE electrical vault fires. Carbon Dioxide (CO₂) is an inert gas and will not support combustion. It has a smothering effect on fire, is heavier than air, and excludes atmospheric oxygen from the fire. Carbon Dioxide discharges as a vapor and thus works best in confined spaces. Carbon Dioxide is a non-conducting extinguishing agent. The San Francisco Fire Department recently received a new CO2 unit that was funded through a grant from PGE. In this section we include both units as both are in service.

Fireboat

The Fireboats of the SFFD provide suppression protection to vessels anchored at the many piers of the Port of San Francisco as well as those vessels anchored out in the Bay. Additionally, the fireboats are capable of assisting shore side suppression incidents. The Auxiliary Water Supply system of San Francisco includes five salt-water manifold inlets strategically placed along the waterfront. Each manifold can accept up to ten large lines from a Fireboat. A Fireboat can also assist shore side units by simply stretching lines off the boat onto shore to assist in water supply. One of the most useful features of both boats are the under pier nozzles mounted on either side of the bow, just above the waterline. These nozzles can extinguish fire that formerly would require divers in the water using float mounted small hand lines.

Fireboat Guardian

The Guardian was a gift to the people of San Francisco from two anonymous and very generous donors from the Marina who gave \$300,000 towards the purchase of the vessel shortly after the earthquake of October 17, 1989.

Overall Length: 89 feet

Beam 20 feet

Fireboat

Draft	7 feet
Construction	1950, British Columbia Marine Shipyard
Max Speed	12.5 knots
Fuel	Diesel, 6750 gallons
Running Time:	96 hours
Diesel Engines	2; provide propulsion & pumping, 500 hp each (new engines installed and general refitting 1971)
Pumps	5-two stage centrifugal, capable of 22,000 GPM at 150 psi.
Under Pier Monitors	2
Extinguishment with CO₂	Ten, 200 lb. CO2 cylinders
Extinguishment w/Foam	1400 gallons available foam, using eductors
Hydraulic Crane	1
Three Person Skiff	1, with 30 hp outboard motor

Fireboat Phoenix

Oct. 17, 1989: at approx. 6:20 pm, Phoenix was called to respond to the Marina, but with only three crew available - Phoenix pumped continuously with 10 lines working for 15 hours with two pumps wide open - at 6400 GPM (over 5.5 million gallons of water). The fireboat saved the Marina.

Overall Length	89 feet
Beam	19 feet
Draft	6 feet
Construction	1954, by Plant Shipyard (Alameda)
Jet Thrusters	Fore & Aft
Max Speed	15 knots
Fuel	Diesel, 2600 gallons
Running Time:	34 hours
Diesel Engines	2; provide propulsion & pumping, 500 hp each (installed new in 1985)

Fireboat

Pumps	3-two stage centrifugal, either 9600 GPM at 150 psi, or 3200 GPM at 300 psi & an additional 3200 GPM at 150 psi.
Hose	3,000 feet of 3-inch line
Deck Monitors	3
Water Tower	1
Under Pier Monitors	2
Extinguishment with CO₂	Ten, 200 lb. CO2 cylinders
Extinguishment w/Foam	500 gallons available foam, using eductors
Hydraulic Crane	1
Three Person Skiff	1, with 30 hp outboard motor
